Regarding PepsiCo Products

July 2026

Dear Sir/Madam,

This letter is to confirm raw materials, ingredients and packaging materials used for PepsiCo products comply to relevant International and local Food Safety and Regulatory Standards where used in the manufacturing and distribution of PepsiCo Branded Products.

As a global food and beverages business PepsiCo has rigorous systems and processes in place to ensure that the raw materials, ingredients, and packaging used for our products meet all applicable laws and regulations in the jurisdictions where they are sold.

PepsiCo's raw materials, ingredients and packaging material review incorporates collecting relevant documents including, but not limited to, chemical hazard control statement (e.g. heavy metals, PFAS, BPA, NIAS), any applicable allergen statement, local regulation specific documents (e.g. California Proposition 65), and applicable testing results. Cross functional teams such as Regulatory, Food Safety, Scientific Affairs and Packaging Quality conduct hazard analysis to ensure raw materials, ingredients and packaging materials are safe, legal, fit for purpose and material qualification is complete per food type and intended use.

PepsiCo maintains clear terms of supply with raw materials, ingredients, and packaging suppliers and their conformity to Food Safety and Quality programs is monitored and verified through Global Supplier Quality Assurance's site approval and reapproval processes.

PepsiCo is committed to the highest standards of consumer safety, product quality and improving the sustainability of our products.

Yours faithfully,

Zorica Šišmanović

Plant Manager
